

## Creek Shores

Creek Shores is bounded by Lake Ontario, Twelve Mile Creek, Twenty Mile Creek and Jordan Harbour, and Regional Road 81 to the south which defines the lower boundary of the escarpment bench. It is a delta shaped area characterized with long gentle slopes and an abundance of small creeks draining into Lake Ontario. Soils are a complex series of glacial, fluvial and lacustrine sediments underlain by Queenston shale. Temperatures are moderated by Lake Ontario and smaller water bodies and spring warming and bud break are slightly delayed.
