

## **Vinemount Ridge**

Vinemount Ridge is the appellation above and south of the brow of the escarpment. Covering a broad area, it is unique in that it exhibits shallow mostly south facing slopes. The geology in the area is dominated by the Vinemount Moraine and to the east, the Fonthill Kame. This provides early spring warming to its deep clay soils and early budburst for the vines. The area enjoys warm daytime temperatures and cool nights.
