

Addendum to Program Guidelines - Ontario Juice Grape Transition Program

For greater clarity regarding the interpretation of the Program Guidelines, vineyard stock removal may occur on a block-by-block basis within a distinct vineyard. Partial removal of juice grape vineyard stock within a single block may also be permitted, provided that juice grape vineyard stock removal occurs in contiguous rows, leaving only one or more solid, identifiable part blocks containing complete rows of juice grape vines. Growers must specify all block particulars on the program application form. Final decisions regarding eligibility will be made by Agricorp.

A block is a distinct section of a vineyard recorded as such in the VITIS database. If the juice grape vines are not recorded in the VITIS database, Agricorp will determine the boundaries of blocks based on the variety and age of the vines and any physical features that may be present in the vineyard.
